## Professional Experience

**Software Developer**                                  Feb 2018 - Present

**Interfront ( SARS )  Enterprise SOC Ltd**                Cape Town

I support existing and develop new functionality and components.
Understand existing product and domain elements and work with business analysts to refine and implement new requirements. Refactoring and improve the code to keep the product maintainable and adaptable to new requirements. Work effectively in a team environment and follow / develop product software development processes and standards. Create unit tests and integrated systems tests to show that the developed functionality works as intended. Create technical documentation that explains how the various components of the system work and how to use them. Do root cause analysis on bugs to find and fix the cause of a problem in an integrated system. Build and deploy the system on an application server. Do debugging on an application server. Debugging on a liberty server. Incorporate the work done by other developers and do whatever is necessary to get the system up and running again with the changes , including debugging other people's code making changes to the test data etc. Usage of Git and Jira admin.

**Financial Investigator ( Detective)**          Jan 2017 – Feb 2018

**South African Police Service**                        Cape Town

Conducting both internal and external investigations resulting from suspicious activity. Apply investigative, interview, interrogative techniques. Validating factual information and prepare reports. Bring relevant perpetrators to justice before a court of law.
